

ABSTRACT

A food preparation table of the present invention includes a pan holder for accommodating pans; an insulated
5 wall surrounding the pan holder; even number n of brackets fixed on the insulated wall; $n/2$ covers, each having a pair of first hinge axles and a pair of second hinge axles on opposite sides thereof, wherein the pair of first hinge axles and the pair of second hinge axles are slidably
10 engaged with the brackets. The pair of first hinge axles and the pair of second hinge axles are inserted to a pair of plates attached to the opposite sides of the cover. Each of the brackets includes a slanted guide surface for guiding corresponding first hinge axle, wherein the pair of the
15 first hinge axles are closer to a front portion of the cover than the second hinge axles.
